Dear Indra,

I am writing you on behalf of Andy Pimentel who is away with vacation.

Following the positive impression you gave during your interviews with us and ASML, you have been selected to remain on the short list of candidates we are evaluating for the PhD position.

However before we enter the final discussion to select a candidate, we wish to perform a short assessment of your technical skills. This assessment takes the form of a programming exercise, for which you will find the assignment attached to this e-mail. This exercise was crafted to involve multiple programming skills that will be required in the research project.

Note that the description of the exercise has several open-ended questions and there are many correct answers. We value your time and thus wish that you choose a solution that you can implement in less than one or two days, if possible (also, we will not give extra value to a comprehensive, intricate solution that requires more than a few days to implement). We also acknowledge that your prior programming skills are with the .NET ecosystem, and we will thus find a solution written in a .NET language agreeable.

You are invited to submit a solution to this exercise within two weeks, that is up to and including August 15th. I will personally discuss your solution with you shortly after you submit it.

Yours faithfully,

--

Raphael Poss
